## Comments

1. Monoclonal antibodies acting as tumor necrosis factor alpha inhibitors are classified in L04AB - *Tumor necrosis factor alpha (TNF- $\alpha$ ) inhibitors*. Monoclonal antibodies acting as interleukin inhibitors are classified in L04AC - *Interleukin inhibitors*. All other immunosuppressant monoclonal antibodies are classified here.

## Comments

1. This group includes immunosuppressants, excluding agents for transplant rejection and multiple sclerosis.
2. Ozanimod and cladribine are classified in L04C - *Immunosuppressants for multiple sclerosis*.

3. Basiliximab is classified in L04BA - *Monoclonal antibodies for transplant rejection* .
  4. Tacrolimus is classified in L04BX - *Other immunosuppressants for transplant rejection* .
  5. Monoclonal antibodies acting as tumor necrosis factor alpha inhibitors are classified in L04AB - *Tumor necrosis factor alpha (TNF- $\alpha$ ) inhibitors* . Monoclonal antibodies acting as interleukin inhibitors are classified in L04AC - *Interleukin inhibitors* . All other immunosuppressant monoclonal antibodies, excluding agents for transplant rejection and multiple sclerosis, are classified here.
  6. Itacitinib is classified in L04BX - *Other immunosuppressants for transplant rejection* .
  7. Daclizumab, ciclosporin, begelomab, azathioprine, and thalidomide are classified in L04A - *Immunosuppressants, excl. agents for multiple sclerosis and transplant rejection* .
  8. Begelomab is classified in L04AE - *Monoclonal antibodies* .
  9. Daclizumab and azathioprine are classified in L04A - *Immunosuppressants, excl. agents for multiple sclerosis and transplant rejection* .
